

CERTIFICATIONS

QuickWall's certifications pairs ease of mind with its perfect system. Certifications include CFIS approval, fire resistance test by Intertek, applicable compliance with CAN/ULC S102.2-10, Standard Method of Test for Surface Burning Characteristics of Flooring, Floor Covering, and Miscellaneous Materials and Assemblies.

QUICKWALL HAS RECEIVED A PROPER FIRE RATING

Construction and renovation projects require a unique finesse, and everything must be handled with care in order to avoid unnecessary issues. In the healthcare industry, all renovations and materials used in those renovations must meet or exceed ASTM-E84 Class A fire standards for the safety of the general public.

The QuickWall system has been tested and approved for this classification, and is particularly resistant to fire and smoke damage. Our customers have complete peace of mind, knowing their projects will be completed without dealing with fire issues. However, some wall products on the market can be placed without meeting ASHE's NFPA 241 requirements as long as there is some sort of sprinkler system present to extinguish fires automatically. Before using one of the non-rated options on the market, it is recommended to contact your local code authorities to ensure that your sprinkler system matches NFPA 241's requirements for non-rated walling solutions.

We have seen many projects where other issues arise when using non-rated barriers such as the fire watch protocol that is legally mandated if your sprinkler system fails. Our QuickWall solution removes these concerns and meets all requirements.
